ABOUT ME

Third year undergraduate specializing in Data Science at SLIIT with a strong interest in turning data into actionable insights. Seeking an internship opportunity to expand my knowledge, gain hands-on industry experience, and contribute to meaningful projects. Excited to learn from industry professionals, embrace new challenges, and grow both personally and professionally while supporting the organization’s goals and long-term success.

SKILLS

Data Engineering & BI
SQL Server, SSIS, SSAS, Power BI, DAX, Excel

Databases
SQL, MySQL, MongoDB

Web & Application Development
HTML, CSS, JavaScript, React, Spring Boot, REST APIs

Version Control & Tools
Git, GitHub, Postman

Data Analysis & Visualization
Excel, Power BI, Predictive Modeling, OLAP Analysis

Programming & Data Science
Python, R, Java

Design & Prototyping
Figma , Canva , Draw.IO

EDUCATION

BSc (Hons) IT Specialized in Data Science Srilanka Institute of Information Technology ↗	2023 – Present
A/L Examination (2020) Physical-Science Stream Badulla central college ↗	2013 – 2019
Primary Education Dharmadutha college ↗	2006 – 2012

AWARDS

Dean’s List Award – Year 2 Semester 2 (2025) ↗ SLIIT	2026
- Recognized on the Dean’s List for achieving a GPA 3.77 .Maintained high academic standards while actively contributing to extracurricular activities, leadership roles, and student organizations.	

PROJECTS

Sri Lankan Market Price Intelligence & Analytics Platform ↗ Technologies: Python, BeautifulSoup, SQL Server, Power BI - Built an automated data pipeline to collect and analyze Sri Lankan retail commodity price data. - Developed a SQL Server data warehouse using a Star Schema design to support historical analysis and reporting. - Created an interactive Power BI dashboard with price tracking, trend analysis, KPI monitoring, and commodity-level filtering. - Automated daily data collection and dashboard refresh processes to provide up-to-date market insights.	2026
MediBOT AI – Retrieval-Augmented (RAG) Medical Chatbot ↗ Technologies: Python, LangChain, Pinecone, Groq (Llama 3.3 70B), Streamlit ,Huggingface - Developed a medical question-answering chatbot using Retrieval-Augmented Generation (RAG). - Built document processing and retrieval pipelines using LangChain and Pinecone to provide answers from a medical knowledge base. - Implemented document ingestion, text chunking, embedding generation, and vector search workflows. - Deployed the application on Streamlit Cloud for interactive user access.	2026
IPL Match Winner Predictor – ML-Powered Cricket Match Outcome Prediction ↗ Technologies: Python, Pandas, Scikit-learn, Streamlit, Joblib - Developed a ML system to predict IPL match winners using historical match data from 2008–2020. - Performed data analysis, feature engineering, model training, and evaluation using Random Forest and Logistic Regression algorithms. - Improved prediction accuracy through historical team performance features and iterative model development. - Deployed an interactive Streamlit web application with match prediction capabilities and real-time match insights.	2026

Data Warehousing & Business Intelligence Solution for UK Road Accident Analysis [↗](#)

2026

Technologies: SQL Server (SSIS, SSAS), Power BI, Excel, Data Warehousing

- Developed an end-to-end Business Intelligence solution using the UK Road Accident dataset (2009) for analytical reporting.
- Designed and implemented a Star Schema data warehouse with fact and dimension tables, including Slowly Changing Dimensions (SCD).
- Built ETL pipelines using SSIS and created SSAS OLAP cubes for multidimensional analysis.
- Developed interactive Power BI dashboards and Excel-based OLAP reports with drill-down, slice-and-dice, and drill-through capabilities.

Statistical Modelling of Collaborative Learning & Communication Skills [↗](#)

2026

Technologies: R, Statistical Analysis, Data Visualization

- Conducted a statistical modeling study to analyze the relationship between collaborative learning and students' communication skills.
- Performed data cleaning, exploratory data analysis (EDA), Pearson correlation analysis, and linear regression modeling using R.
- Visualized relationships and evaluated model performance using scatter plots, regression lines, and residual analysis.

Northbridge Smart Campus Hub – Intelligent Resource & Incident Management Platform [↗](#)

2026

Technologies: Spring Boot, React.js, REST APIs, OAuth 2.0, GitHub Actions

- Developed a centralized campus management system to streamline resource booking, incident reporting, and administrative operations.
- Designed role-based workflows for students, lecturers, administrators, and support staff with secure access control and real-time notifications.
- Implemented core features including smart resource booking, conflict prevention, incident ticketing, holiday management, and approval workflows.
- Built the system using a full-stack architecture with Spring Boot backend and React.js frontend, integrated with REST APIs and CI/CD via GitHub Actions.

PurePortion – AI-Powered Food Waste Analytics & Smart Meal Planning System [↗](#)

2025

Technologies: Mern , API Technologies, TailwindCSS

- Developed a web-based smart meal planning system to reduce food waste through inventory tracking, portion calculation, and financial management.
- Implemented core modules including expense tracking, portion and cost calculation, and financial reporting.
- Built features such as user authentication, inventory management with expiry tracking, recipe suggestions, and report generation.
- Contributed to backend logic development, system integration, and database design in a collaborative development environment.

PRIME – Mobile Wellness Tracking & Habit Analytics Application [↗](#)

2025

Technologies: Android Studio, Java/Kotlin

- Developed a mobile application for habit tracking, mood monitoring, and wellness reminders.
- Implemented core features including daily habit tracking, mood journaling, hydration reminders, and customizable notifications.
- Designed and built a responsive UI/UX focused on smooth and user-friendly mobile experience.

VOLUNTEER EXPERIENCE

MS CLUB OF SLIIT [↗](#)

2026 – Present

Design Lead

- Contributed to multiple club events since joining in March 2025, supporting branding, media, and design-related activities.
- Served as a **UI Mentor** for the Mini Hackathon, guiding participants on user interface design principles and creative problem-solving.

IEEE Engineering in Medicine & Biology Society of SLIIT [↗](#)

2025

Design Team Co-Lead

- Served as the **Design Team Co-Lead** for Cell Spell 2025, contributing to the planning and execution of creative design initiatives for the event.
